■ (DE2730785A) The optical system provides a partial Image which is fixed in the region of the flat face of the transparent surface structure. This partial image consists of several parallel Abstract: strips (20) which are spaced from one another and form image lines (18, 20). Between them there are transparent strips (26) through which light can pass, as though there were no material present at those points. All the strips may be of approx, the same width and the width of each grid lens rib corresponds to the total width of one of the strips forming the image lines and an adjacent transparent strip.
